Secure-Backup/Restore

The Secure Backup/Restore script mainly contains 3 files:

- backup_restore_lib.sh

  - `validate_backup_params()`

  - `backup()`

  - `validate_restore_params()`

  - `restore()`

- restore.sh

- backup.sh

Note

The two scripts **backup.sh** and **restore.sh** should source **backup_restore_lib.sh** and invoke the corresponding functions.

Let's dive deeper into each file.
